Art Unit: 2883

#### **DETAILED ACTION**

#### Election/Restrictions

Applicant's election with traverse of Invention I, claims 1-9 in the reply filed on July 25, 2005 is acknowledged. The traversal is on the ground(s) that the inventions can be searched and examined in one application without imposing an undue or serious burden upon the examiner. This is not found persuasive because the search for the elected invention would not overlap with that which is non-elected. Furthermore, any determination as to patentability of the elected invention would not be sufficient to establish a patentability determination as to the non-elected invention.

Claims 10-13 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Applicant timely traversed the restriction (election) requirement in the reply filed on July 25, 2005.

The requirement is still deemed proper and is therefore made FINAL.

## **Drawings**

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 10. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR

Art Unit: 2883

1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Specification

The specification is objected to because of the following informalities: page 8, line 12, the term "bight" needs to be corrected.

Appropriate correction is required.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chin et al. (US 5,295,052).

Regarding claims 1-4, Chin et al. discloses in Figs. 1 and 2 a light source unit for supplying light via a light guide to a remote location, comprising a support (16) for supporting a light source and a light guide in a prescribed alignment relative to each other, the support comprising a first part for supporting the light source, a second part for supporting the light guide, and at least first and second light baffles between the first part and the second part, the first and second baffles each having an aperture (28, 46) for passing only a portion of light from the light source incident upon the baffle, the arrangement being such that light from the light source must pass through the apertures in both baffles to be incident upon the light guide, and at

Application/Control Number: 10/686,601

Art Unit: 2883

least one ferrule for coupling to the light source unit, wherein the baffles are dimensioned and positioned so as to substantially avoid light from the source being incident upon the ferrule (col. 1, line 43 through col. 2, line 64; col. 3, lines 3-44).

Regarding claims 5-6, Chin et al. discloses the baffles, first part and second part being integral parts of the support and are made of material having a high thermal conductivity, and a fan (112) is provided for directing cooling air onto both the support and the light source and further comprising a duct for directing cooling air across a major surface of support (col. 2, lines 9-17; col. 5, lines 42-44).

Regarding claims 7-8, Chin et al. discloses the light source unit having a housing (12, 14) partitioned to provide a compartment enclosing the light source, support and light guide holder, and the fan (112) being positioned outside of the compartment to direct cooling air onto the light source (80) via an opening in the wall of the compartment (See Fig. 2; col. 5, lines 42-44).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chin et al. (US 5,295,052).

Regarding claim 9, Chin et al. discloses the claimed invention except for a plate being pivotally mounted. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the plate be pivotally mounted, since it has been held that the

Application/Control Number: 10/686,601

Art Unit: 2883

provision of adjustability, where needed, involves only routine skill in the art. In re Stevens, 101

USPQ 284 (CCPA 1954). The motivation to have to plate be pivotally mounted is so as to allow

for ease of use and adjustment when operating the light unit.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Mary A. El-Shammaa whose telephone number is 571.272.2469.

The examiner can normally be reached on M-F (8:30am-5:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Frank G. Font can be reached on 571.272.2415. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
